ABOUT ME

Fresh Computer Science graduate with a solid foundation in web development, system design, and basic IT support. Experienced in academic and project-based development including web applications, machine learning fundamentals, and system implementation.

EDUCATION

UNIVERSITY TUNKU ABDUL RAHMAN KAMPAR | May 2021 - Oct 2025

Qualification : **Bachelor of Computer Science (Honours)**
MUET (BAND 3.5)

WORK EXPERIENCE

PUSAT MULTIMEDIA CORNER SDN BHD | 4th Nov 2024 - 8th Feb 2025

Web Assistant (Internship)

I assisted in updating and maintaining the company's official website, including content and layout improvements. I enhanced the website's appearance and responsiveness using CSS styling to ensure it worked well on different devices. I also helped senior staff with basic hardware installation and setup. Additionally, I provided general IT and technical support during daily operations to help keep things running smoothly.

SKILLS

- C++
 - Python
 - Java
 - HTML & CSS
 - JavaScript & PHP
-

Academic Project

Mobile Development

- **Personalized Diet & Workout Planner Application Development (Final Year Project)**

Developed a fully functional mobile app providing personalized diet plans and workout routines based on user goals. Used Firebase for database management, including user authentication (login/signup) and real-time storage of user profile and preference data. The app include four fragments - **Diet Fragment**(for user to record every meal consumed within the period), **Workout Fragment** (includes exercise video for user to do), **Progress Fragment** (to keep track on the their progress in Statistics) and **User Fragment** (Edit User details)

- **Simple Quiz Game Application for Students**

Designed a lightweight quiz app for students to test knowledge across different topics. Implemented question scoring, answer validation, and a simple progress tracker.

Web Development

- **Interactive Recipe and Culinary Web Application**

Created an interactive web platform where users can browse, search, and share recipes. Used **XAMPP** (phpMyAdmin) to perform **CRUD** operations (**Create, Read, Update, Delete**) on recipe data tables. Built with **PHP, HTML, CSS**, and **JavaScript** for dynamic content display and responsive layout.

Machine Learning

- **Traffic Sign Recognition and Detection System**

Built a traffic sign recognition system using **OpenCV** and **C++**. Started with **image segmentation** by performing **canny edge, longest contour**, etc. to remove the background noise. After that, performed **color detection** and **shape classification** to detect signs. Used **KNN** and **SVM** classifiers to evaluate model performance, reporting **confusion matrix**, includes **accuracy** and **F1 scores** for three sign categories: **Warning, Guide**, and **Regulatory**.

- **Skin Cancer Risk Predicting System**

Developed a predictive model to assess skin cancer risk based on input data. Trained models using **EfficientNet B0** and **ResNet-50** architectures. Dataset obtained from **Kaggle**. Used **Gradio** as the user interface for easy interaction and risk prediction output.
